Subject: How to modify cardPresso's Audit Report data

It is possible to modify the data presented in cardPresso's Audit Report using Script. The sample card available for download here contains the script described below for you to test.

The instruction in the **After Printing Record** event (seen in the print screen below) indicates that, after printing each record, the data in the variable content will be added to the report.

TECHNOTE | PAG. 1/ 2

In the **Audit Successful Print** event, the database columns which will be added to the report are concatenated into the variable content.

The data will then be added to the Audit Report:

Operation	User	Document	Description	Event Result
Print Document	ADMIN	sample		
After Print	ADMIN	sample	0	
Print Document	ADMIN	sample	OK,1 Copies	1 Sonia Davolio
